← Lower risk ————— Higher risk →

This standardized risk indicator SRI (Summary Risk Indicator) shows, assuming a five-year holding period, how likely it is to lose money on this product because the markets develop in a certain way or the capital management company is unable to pay you out. The risk of potential losses from future performance is considered low. If market conditions are very unfavorable, it is very unlikely that the ability to execute your redemption request will be impaired.

¹ Net fund assets (gross fund assets less payables and provisions).

² Including undeveloped land, property under construction and real estate held by real estate companies.

³ Cash at bank and time deposits as well as securities (100 % of market value).

⁴ Includes all costs (ex transaction costs, management/maintenance costs and finance costs for real estate and real estate companies) debited from fund assets in the financial year 2023/2024, as per 31.03.2024 (TER).

⁵ Includes the estimated costs (ex transaction costs, management/maintenance costs and finance costs for real estate and real estate companies). This cost estimate does not meet the requirements of a cost statement stipulated under supervisory law as per MFID, which you will receive in good time before any order is executed.

⁶ Calculated according to the BVI method (excluding the entry charge, distribution immediately reinvested).

⁷ An investment amount of 1,000 Euro and a 5 % entry charge (which is due on acquisition and will be deducted in the first year) have been assumed for the sample calculation for investors (net). The entry charge is the maximum amount, which may be lower in the individual case. Additional custodial fees to safeguard the shares may be due, which may reduce performance for investors.
